- ☐ Development of HR metrics ✓
- ☐ Criteria for good HR activity metrics

HR Data Preparation

No matter how much you trust your quants. Do not stop asking them tough questions

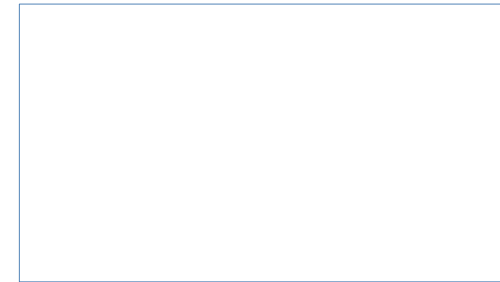

Questions related to your data

- ☐ What was the sources of your data
- ☐ How well sample data represent the population
- ☐ Does your data distribution include outlier (How did they affect the results)
- ☐ What assumptions are behind your data analysis
- ☐ Why did you decide on that particular analytical approach
- ☐ What alternatives did you consider

Internal
External → Salary
CTC

Man → 50K → 2 Lakh

Descript Di., Pr.

Measurement of data

☐ Absolute value as measured

☐ Ratio or percentage

☐ Percentile

☐ **Correlated information**

Leader's behavior and employee engagement

$\rightarrow \frac{\text{No. of Applicants}}{\text{Total}} =$

M/F = $\frac{2}{3}$ 24% 64%

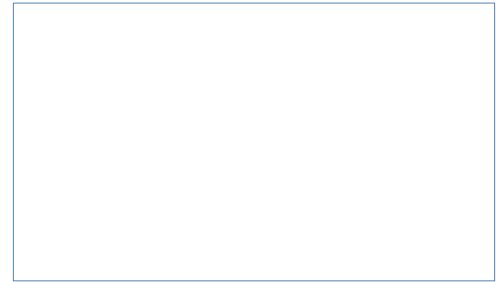

Performance Rating

Criteria for good HR activity metrics

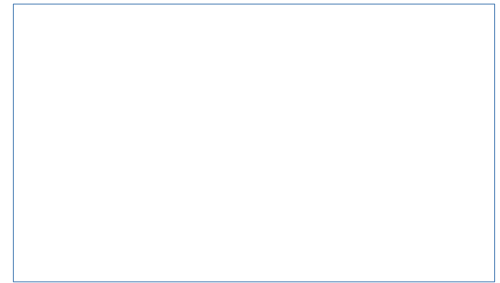

- Every metric that we capture should be documented
- Every metric should have a narrative definition – explain to the unfamiliar what this metric is
- Every metric should have mathematical formula. Even if the formula is as simple as count

$$\% \text{ of Absenteeism} = \frac{\text{Total}}{\text{TO}} \times$$

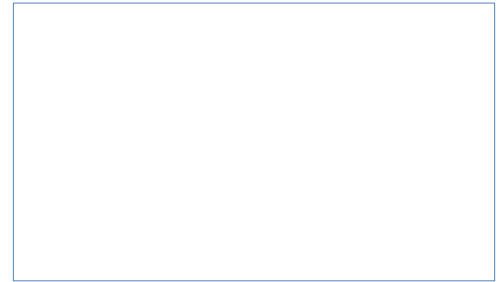

Criteria for good HR activity metrics

- Every metric should provide information as to what the calculation includes, and often equally
- important – explicitly describe what it does not include.
- Every metric should include a description why it is being captured and what it is being used for. (we should not be capturing anything that is not used)

Criteria for good HR activity metrics

- It can be helpful to categorize your metrics into groups.
- Every metric should indicate the official source of the raw data.

Thank You
