Introduction:

Selection is the process of picking individuals who have relevant qualifications to fill jobs in an organization. Selection is much more than just choosing the best candidate. It is an attempt to strike a happy balance between what the applicant can do and what the organization requires.

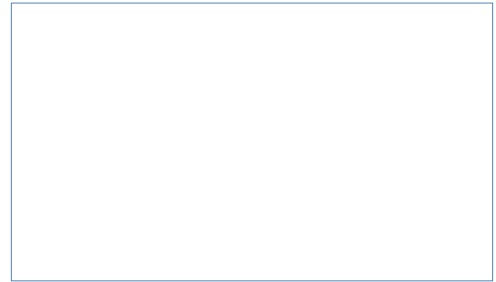

Selection Process:

Contents Of Application Blank:

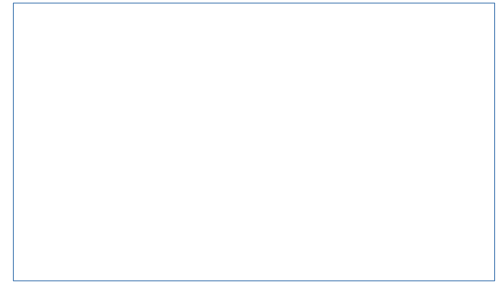

- ❖ Personal data (address, gender, identification marks, etc)
- ❖ Marital data (single or married, children, dependents)
- ❖ Physical data (height, weight, health condition)
- ❖ Educational data (levels of formal education, marks, distinctions)
- ❖ Employment data (past experience, promotions, nature of duties, reasons for leaving previous jobs, salary drawn, etc.)
- ❖ Extra-curricular activities data (sports/games, NSS, NCC, prizes won, leisure-time activities)
- ❖ References (names of two or more people who certify the suitability of an applicant to the advertised position)

Recruitment and Selection Practices In India:

Due to the meagreness of the education system there is a shortage of trained work force. There exist situations wherein jobs are limited and applicants are many.

There are two sources of recruitment in India namely external source and internal sources -An **internal source** are generally used for higher position and to motivate the work force by giving them better opportunities for better deployment and to career development. On the other hand, an **external source** of recruitment is usually to fill entry level jobs.

Recruitment and Selection Practices In India: (Cntd 1)

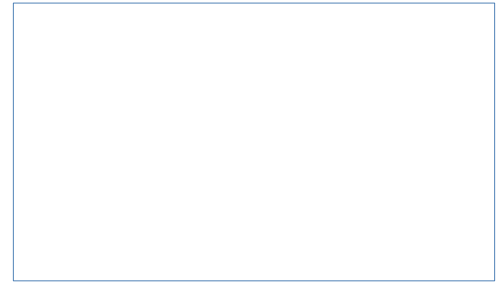

Basically, there are **four methods** that are being adopted in India.

Direct Method; this method includes campus interview, and the organization keeps unsolicited applications.

Indirect method; this method includes advertisements in newspaper, television, radio, journal, magazines etc.

Internal method; this method is a practice of filling vacancies from within the organization through transfers and promotions and the information of the vacant position is communicated through internal advertisements. All transfers and promotion decisions are taken by the management.

Third- party method which includes consultancy firms, head- hunting services and they use computerizes data bases

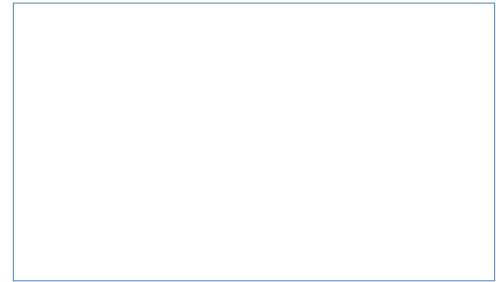

Recruitment and Selection Practices In India: (Cntd 2)

The companies also make use of their **own websites** where people give their application forms as per the need and then the company can call the applicants for interview whenever there is a vacancy.

Furthermore there are **special sites** only meant for recruitment purposes. The companies advertise the vacancies through these websites which are www.naukri.com, www.monsterjobs.com, www.shine.com, www.timesjobs.com, www.fresherworld.com etc.

There are number of **placement agencies** and print media also helps in getting the job.

The next best way is **advertisement** in India which is through newspaper and magazines by the government of India and these carries the details of the government jobs as well.

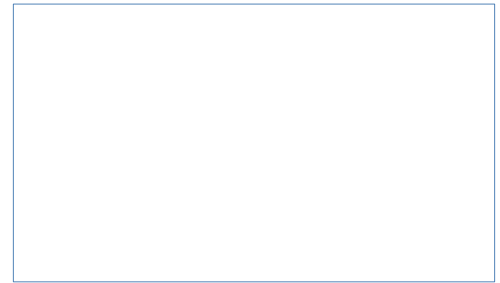

Recruitment and Selection Practices In India: (cntd 4)

Written tests are being taken if required for the position which includes aptitude test, personality test etc.

Interviews are not structured and many a times the selection procedure is not clear to the candidate.

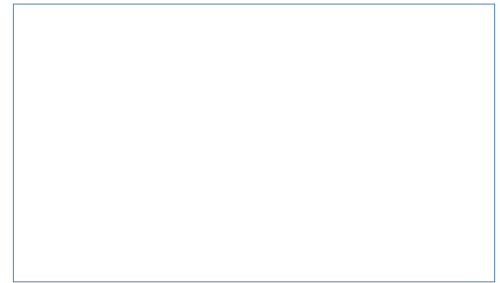

The **major problems** in Indian selection process are the external influences, prejudices and gender bias which is there in most of the organizations.

Indian companies usually **avoid hiring unskilled labour** as it would be a liability for the organization but now-a-days due to globalization they are hiring on casual and contract basis; if they find that the performance is up to the mark the workers can go to the next level and is retained in the organization.

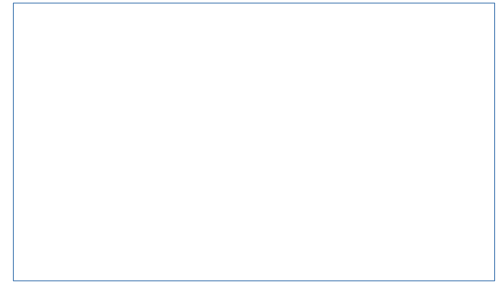

Recruitment and Selection Practices In India: (cntd 5)

Skilled workers are mostly students who are called **trainees hired through campus interview** and are on probation for 1 to 2 years and are absorbed, if the organization is satisfied with the performance. Finally the **middle level and top level managers** are generally promoted from within the organization.

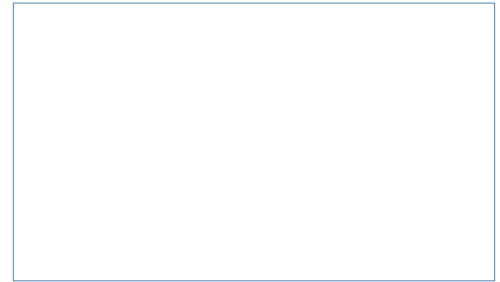

Recruitment and Selection Practices In Japan:

It has been found out that Japanese system grades human potential through **merit based higher education**, so that the best talent goes to the organization. The process of selection differs from organization to organization and the most common parameters are interview, personal skills, teamwork and interpersonal skills.

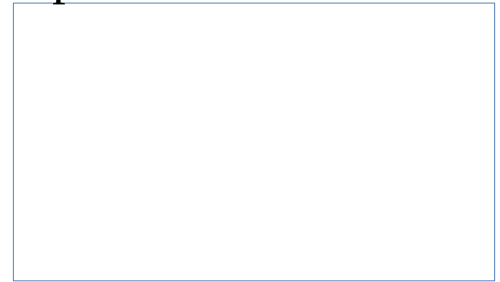

Recruitment and Selection Practices In Japan:

Attitude is very much important in Japanese companies and they believe in long term employment and life time career. For the regular employees there are **no written contracts** according to which they have to work. Job security and loyalty is there among the employees.

- The most pervasive **recruitment process in Japan** is as follows.-Graduates are recruited every year at about the same time and the first announcements are made in early summers disclosing the number and different types of jobs available. Candidate's applications, personal contacts, written exams, interviews and medical checks, final decisions on acceptance are made in the fall and from 1st April joining.
- They give importance to the performance of the team, not to the performance of Individual. Leading companies like **Maruti Suzuki, Hitachi in India** are very successful due to their unique system of Japanese recruitment practice.

Recruitment and Selection Practices In UK : (cntd)

Interviews are taken and conducted by the members of HR department and three to four rounds of interview takes place.

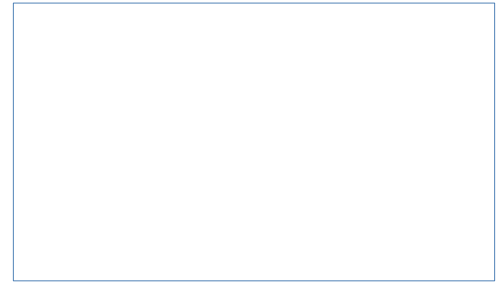

Qualification should match with the job requirement and in some cases work experience also matters.

They are giving importance to the **older generation as the work force** is getting older and the percentage of employees under the age of thirty five is decreasing.

Concept of **life time employment** does not exists in the organization.

Hence, there is a great difference in the HR practices across countries which prove that culture plays a very significant role and every country has their own style of conducting business.

The policies and procedures of HRM vary from **country to country because of the diversity in the work force.**

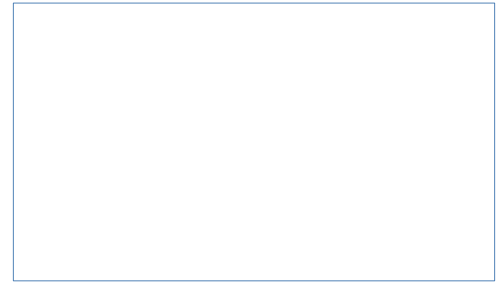

Singh.A. (2014) Cultural Difference in Recruitment and Selection Practices in Select Countries,) Vol. 1, Issue 1, IITM Journal of Business Studies (JBS)

Conclusion on different Recruitment and Selection Practices:

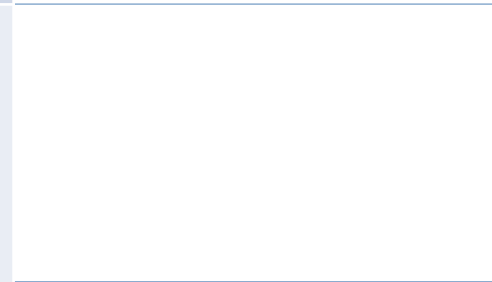

Culture of the respective countries shapes the path in which procedures and practices are undertaken.

There are number of differences between the Asian and European work forces. While the workers in the Europe prefer to work independently, on the other hand Asian workers seeks a sense of belongingness and feel more proud in their organization than in their individual job.

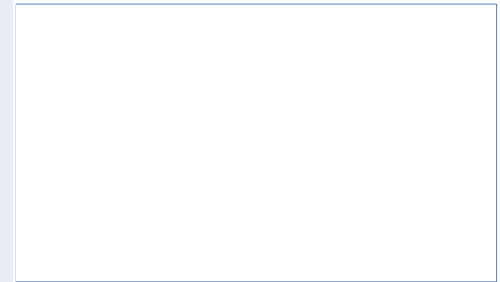

Recruitment and Selection Practices: A Comprehensive End to End Process

Steps	Poor Practices	Best Practices	Implementation Challenges
1. Anticipate the needs	- Hiring only when you have an opening - Having an ad-hoc succession planning - Overlooking the skills of your organisation will need in the future. - Indulging in irrational optimism	- Conduct ongoing proactive analysis of future needs - Continually evaluating the pool of potential talents. - Developing rigorous forecasts of talents needs	- Linking your talent plan to your strategic plan - Incorporating inputs from HR professionals into the strategic planning process
2. Specify the jobs	- Relying on Generic Competency Models - Looking primarily for charisma, general ability and track record.	- Defining specific demands of the jobs - Specifying which skills and experience are relevant for job	- Ensuring a close dialogue between HR and Top management - Building upfront consensus among key decision maker

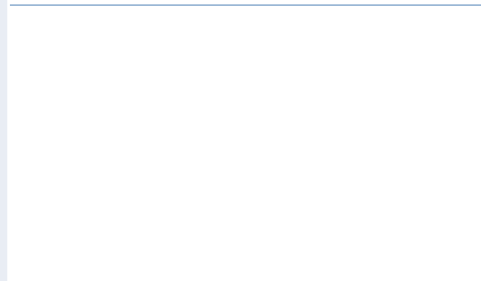

Recruitment and Selection Practices : A Comprehensive End to End Process (Cntd 1)

Steps	Poor Practices	Best Practices	Implementation Changes
		- Identifying the team where the candidate need t work - Considering how company culture and context affect the role.	about the job requirements.
3. Develop the pool	- Shortcut in developing pool - Limiting the pool - Looking for only external candidates or only internal candidates.	- Developing a large pool - Including insiders and outsiders both - Consulting employees	Encouraging open discussions at the top about when and how to conduct external talent searches.

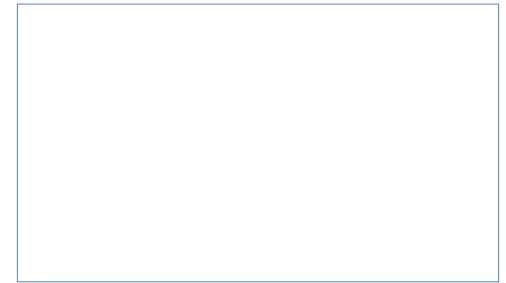

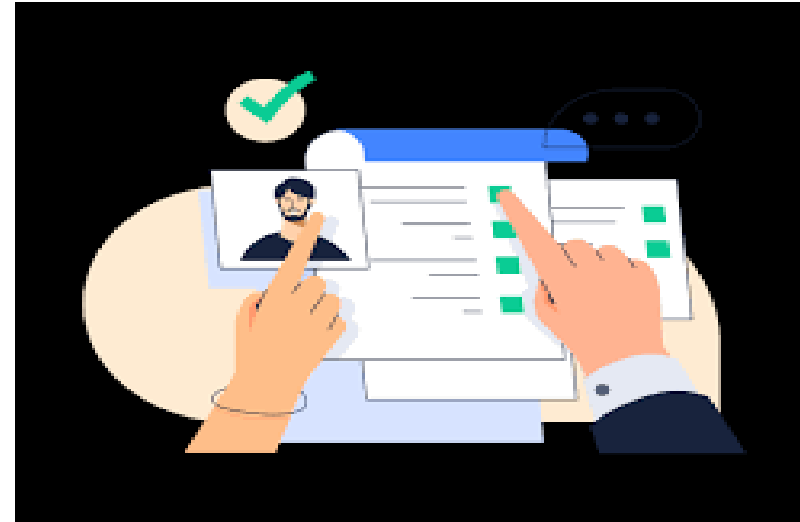

Recruitment and Selection Practices : A Comprehensive End to End Process (Cntd 3)

Steps	Poor Practices	Best Practices	Implementation Changes
6. Integrate the newcomer	- Assuming the new hire is “plug and play” - Providing inadequate support and mentoring.	Using veterans top performers as mentors	- Rewarding mentors - Providing adequate time
7. Audit and Review	- Hanging on to bad hires - Failing to review hire practices and institutionalize the best one	- Removing the bad hire within one year - Regularly reviewing the hiring practices	- Institutionalize the audit and review - Being willing to accept the mistakes, learn and move on.

Selection Tests:

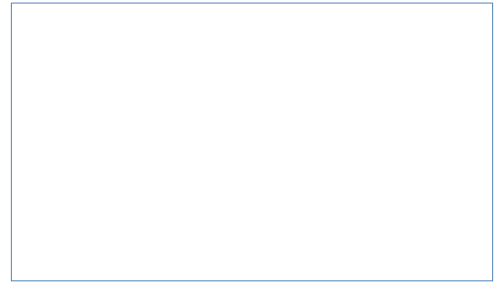

- ☐ Intelligence tests
- ☐ Aptitude tests
- ☐ Personality tests
- ☐ Projective tests
- ☐ Achievement tests
- ☐ Simulation tests
- ☐ Assessment centre
- ☐ Graphology tests
- ☐ Integrity tests
- ☐ Graphology tests
- ☐ Polygraph
- ☐ Integrity tests

Standards For Selection Tests:

Reliability: the ability of a selection tool to measure an attribute consistently; When a test is administered to the same individual repeatedly, he should get Approximately identical scores.

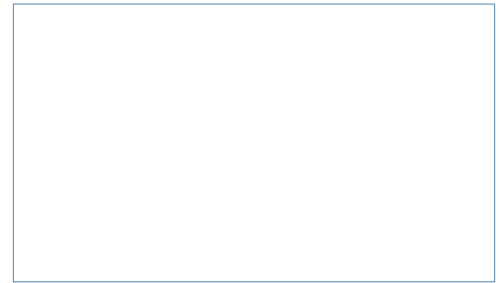

Validity: the extent to which an instrument measures what it intends to measure; In a typing test, validity measures a typist's speed and accuracy.

Standards For Selection Tests:

Suitability: a test must fit the nature of the group on which it is applied
Usefulness: exclusive reliance on any single test should be avoided

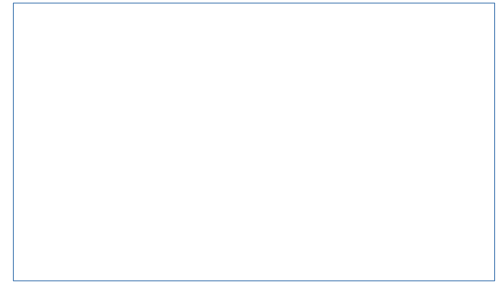

Standardisation: norms for finalising test scores should be established
Qualified people: tests demand a high level of professional skills

Interview Process:

Interviewing is an art and involves a number of sequential steps such as adequate preparation, proper reception, democratic exchange of information, termination of interview in an appropriate manner and objective evaluation of responses, records and other relevant facts.

- ❖ Preparation
- ❖ Reception
- ❖ Information exchange
- ❖ Termination

Types of Interview:

Non-Directive Interview

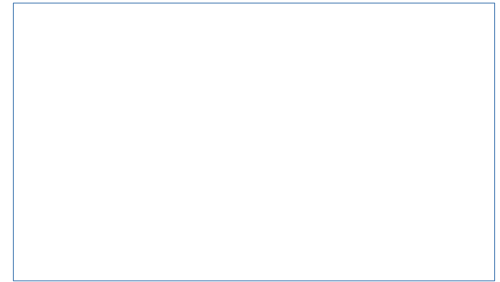

- The recruiter asks questions as they come to mind.

Directive or Structured Interview

- The recruiter uses a predetermined set of questions that are clearly job-related.

Situational Interview

- The recruiter presents a hypothetical incident and asks the candidate to respond.

Types of Interview:

Behavioural Interview

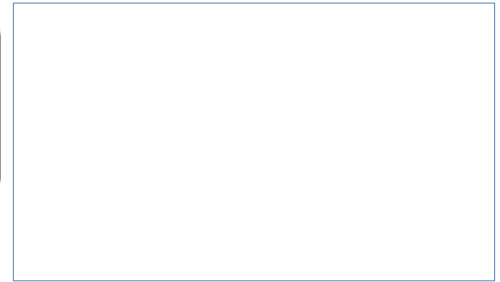

- The focus here is on actual work related incidents and the applicant is supposed to reveal what he or she did in a given situation.

Stress Interview

- The recruiter attempts to find how applicants would respond to aggressive, embarrassing, rule and insulting (at times) questions.

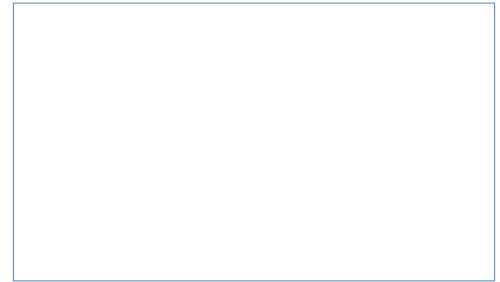

Panel Interview

- Three or four interviewers pose questions to the applicant and examine the suitability of the candidate.

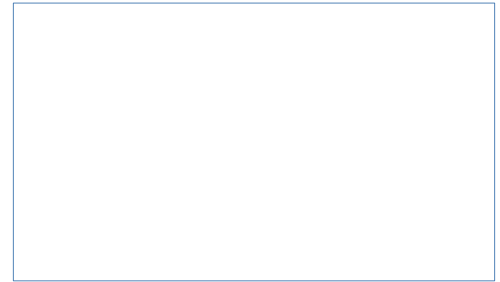

Interviewing Mistakes:

- ✓ **Snap judgements:** deciding the applicant's suitability quickly based on the early impression
- ✓ **Leniency:** the tendency to rate employee high or excellent on all criteria
- ✓ **Stereotyping:** attributing characteristics to individuals based on their inclusion or membership in a particular group
- ✓ **Bias:** allowing the ratings to be influence by the personal likes and dislikes

Interviewing Mistakes:

- ✓ **Halo effect:** a single important trait of a candidate affects the judgement of the rater (like “athletes make good sales people”)
- ✓ **Candidate order error:** the order in which a rater interviews candidates could influence ratings sometimes.

Research Paper

The development of an expert system for effective selection and appointment of the jobs applicants in human resource management

M. Saidi Mehrabad *, M. Fathian Brojeny

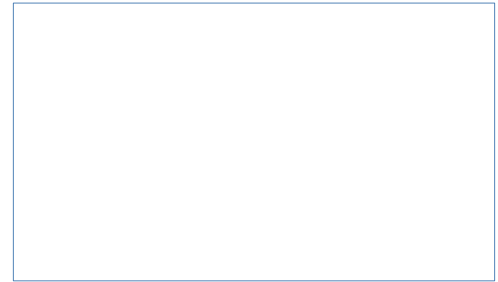

Department of Industrial Engineering, Iran University of Science and Technology, Tehran, Iran

Available online 15 June 2007

Research Paper (Cont.)

Summary:

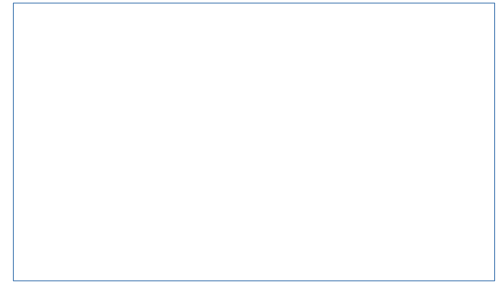

The study focuses on the development and implementation of an expert system to enhance the selection and appointment process within human resource management (HRM). This system is designed to optimize decision-making regarding job applicant selection, appointment, and other personnel operations by utilizing artificial intelligence, specifically expert systems. It aims to provide intelligent services to employees and streamline HRM tasks like job rotation, training, and salary determination based on organizational and job requirements.

Research Paper (Cont.)

Objectives:

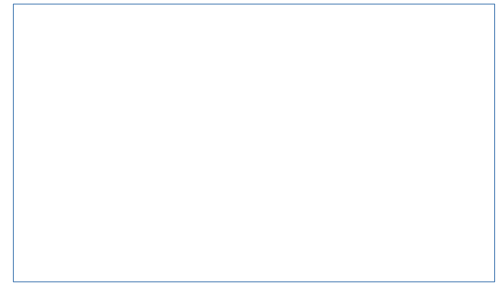

- **Design an Expert System:** To create an expert system that aids in making informed decisions regarding the selection and appointment of job applicants, ensuring compatibility with organizational needs and job specifications.
- **Optimize HRM Processes:** To leverage the expert system for improving various HRM operations, including job classification, recruitment, and personnel evaluation.
- **Enhance Decision Making:** To provide a robust decision-support tool for HR managers, enabling better selection, appointment, and compensation decisions based on accurate data and intelligent analysis.

Research Paper (Cont.)

Methodology:

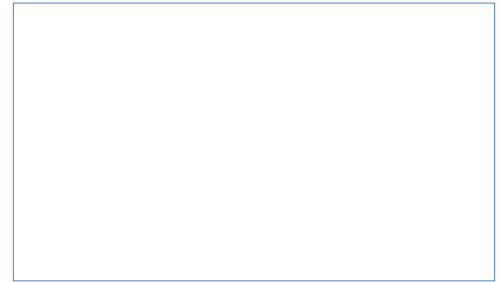

- **Comparative Analysis:** The study begins with a comparison between expert systems and operation research methods, highlighting the advantages of expert systems in HRM.
- **Knowledge Base Development:** Utilizes knowledge engineering to create a rule-based knowledge base, employing techniques like multidimensional scaling (MDS) to identify key job/person specifications.
- **Model Implementation:** Details a step-by-step process for designing and implementing the expert system in HRM, including identifying organizational needs, collecting data, and developing logical rules for decision-making.
- **Case Study in R&D Organization.**

Research Paper (Cont.)

Findings:

- **Expert System Efficiency:** The study demonstrates that expert systems offer significant advantages over traditional operation research methods in HRM, particularly in decision support, learning, and inference capabilities.
- **Knowledge Base Importance:** Building a comprehensive knowledge base is crucial for the effective functioning of the expert system, with rule representation identified as a suitable technique for the HRM domain.
- **Implementation Success:** The application of the model within an R&D organization showcased the system's capability to handle various personnel operations effectively, including job training, workplace assignment, and salary determination.

Thank You
