Steps of Training

Prof Santosh Rangnekar

Department of Management Studies, Indian Institute of Technology- Roorkee

Contents:

- Introduction to Training
- Training vs Development
- Training vs Education
- Learning Principles: The Philosophy of Training
- Different areas of training
- Types of Training
- A Systematic Approach To Training
- Training needs assessment
- Data sources used in training needs assessment
- “Bible” for McDonald’s employees- HRM In Practice
- Methods of Training- on the job and off the job
- Evaluation of A Training Programme

Introduction:

Training is a planned programme designed to improve performance and bring about measurable changes in knowledge, skills, attitude and social behaviour of employees.

Features of Training-

- ❖ Increases knowledge and skills for doing a particular job
- ❖ Focuses attention on the individual job.
- ❖ Concentrates on individual employees
- ❖ Gives importance to short term performance

Training is essential for job success. It can lead to higher production, fewer mistakes, greater job satisfaction and lower turnover.

Training?

Training vs. Development:

Training is concerned with teaching specific job related skills and behaviour. Development is future oriented training, focusing on the personal growth of the employee.

Learning Dimension	Training	Development
Meant for	Operatives	Executives
Focus	Current job	Current and future jobs
Scope	Individual employee	Work group or organisation
Goal	Fix current skill deficit	Prepare for future work demands
Initiated by	Management	The Individual
Content	Specific job related information	General Knowledge
Time-frame	Immediate	Long term

Training vs. Education:

Training, more or less, is job oriented (skill) learning. Education, on the other hand, is a person-oriented, theory-based knowledge whose main purpose is to improve the understanding of a particular subject (a kind of conceptual learning).

Training Pitfalls

Here is a checklist to avoid training pitfalls

- ❖ Attempting to teach too quickly
- ❖ Trying to teach too much
- ❖ Viewing all trainees as the same
- ❖ Giving very little time to practice
- ❖ Offering very little to the trainee in the form of encouragement, praise or reward

Learning Principles: The Philosophy of Training

- ❖ **Modelling**
- ❖ **Motivation.**
- ❖ **Reinforcement**
- ❖ **Feedback**
- ❖ **Spaced practice**
- ❖ **Whole learning**
- ❖ **Active practice**
- ❖ **Relevance**
- ❖ **Environment**

“Bible” for McDonald’s employees- HRM In Practice:

McDonald's is an American hamburger and fast food restaurant chain. It was founded in 1940 as a barbecue restaurant operated by Richard and Maurice McDonald.

- McDonald’s famously and relentlessly standardise every aspect of their product in order to eliminate the need for human input.
- The **Operations and Training Manual** (known to staff as ‘the Bible’) provides detailed prescriptions on every aspect of working life.
- Its 600 pages include full colour photographs illustrating the proper placement of ketchup, mustard and pickle on every type of burger, set out the six steps of counter service and even prescribe the arm motions that should be used in salting a batch of fries.
- Kitchen and counter technology reinforce these instructions as lights and buzzers tell workers when to turn burgers or take fries out of the fat, ketchup dispensers provide measured amounts of product in the requisite ‘flower’ pattern and lights on the till remove the need for serving staff to write out orders as well as prompting them to offer additional items.

Different Areas of Training:

Training is generally offered in the following areas

- ❖ Knowledge
- ❖ Technical skills
- ❖ Social skills
- ❖ Techniques

Methods of Training

iEduNote.com

On-the-job training (internal training)

- 1.Apprenticeship programs.
- 2.Job instruction training (JIT).
- 3.Planned progression.
- 4.Job rotation.
- 5.Creation of assistant - to positions.
- 6.Temporary promotions.
- 7.Committees and junior boards.
- 8.Coaching.

Off-the-job training (external training)

- 1.Lectures.
- 2.Straight lecture.
- 3.Discussion method.
- 4.Demonstrations.
- 5.Seminars and conferences.
- 6.Reading, television and video instructions.
- 7.Business Simulation.
- 8.Cases presentation.
- 9.Equipment simulators.
- 10.Business games.
- 11.Experimental exercise.
- 12.Role-playing.
- 13.Behavior Modeling.
- 14.Computer modeling.
- 15.Vestibule training.
- 16.Sensitivity Training (T-groups).
- 17.Computer-based training.

A Systematic Approach To Training:

1. Assessment	2. Implementation	3. Evaluation
• Determine training needs • Identify training objectives	• Select training methods • Conduct Training	• Compare training outcomes against criteria

Training needs assessment:

A systematic approach to training would consist of three phases: training needs assessment, implementation and evaluation.

Training efforts must aim at meeting the needs of the organisation and the individual employees. This, essentially, involves three types of analysis:

- a. **Organisational analysis:**
- b. **Task or role analysis:**
- c. **Person analysis:**
- d. **Identify training objectives:**

Data sources used in training needs assessment:

Organisational Analysis	Task Analysis	Person Analysis
Goals and Objectives	Job Descriptions	Interviews
Personnel Inventories	Job Specifications	Performance appraisals
Skills Inventories	Performance Standards	Questionnaires/ Survey
Organisational Climate Analysis	Analysis of operating problems	Training Progress
Efficiency indexes	Asking questions about the job	MBO or work planning systems
Management Requests	Performing on the job	Tests
Exit Interviews	Training Committees	Role play/ assessment centres

Evaluation of A Training Programme:

Training can be evaluated at five levels: reaction, learning, behaviour, organisation and results.

Important decision points in training evaluation may be listed thus;

- ❖ Should an evaluation be made?
- ❖ Who should evaluate?
- ❖ What is the purpose of evaluation?
- ❖ What will be measured?
- ❖ How comprehensive will the evaluation be?
- ❖ Who has the authority and responsibility?
- ❖ What are the sources of data?
- ❖ How will the data be collected and evaluated?
- ❖ How will the data be analysed and reported?

Thank You
