Human Resource Analytics

Lecture 31

Training Analytics-I

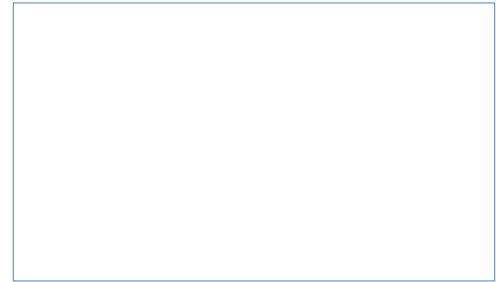

Dr. Abhishek Singh

Faculty-Human Resource
Management XLRI-Jamshedpur

Content

- Difference between training and development
- Training metrics

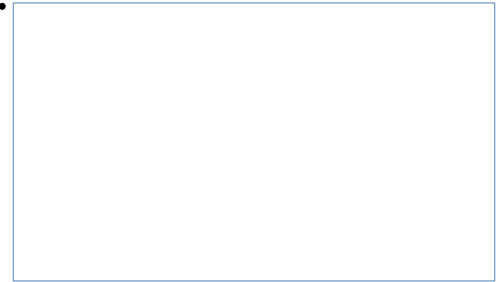

How many hours each employees should receive the training

Who should give the training?

How training analysis should be done?

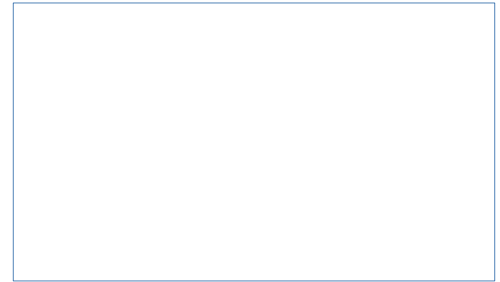

How training should be designed?

How training should be evaluated?

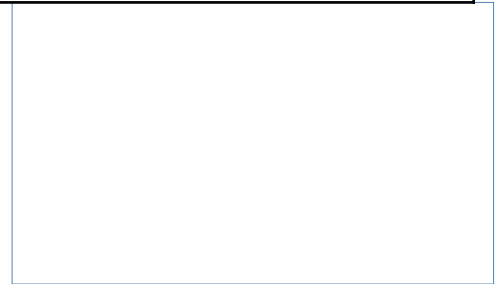

Which type of training should be given to various departments?

Which type of development activity should be given to various departments of an organization?

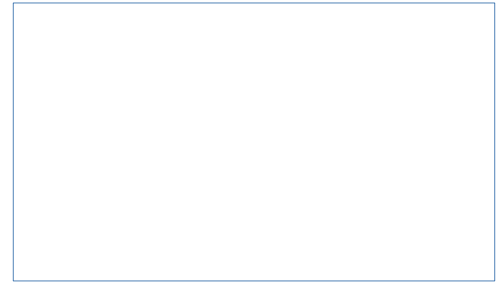

Difference between Training and development

Criteria	Training	Development
Focus	Current	Future
Use of work experiences	Low	High
Goal	Preparation for current job	Preparation for future
Participation	Required	Voluntary

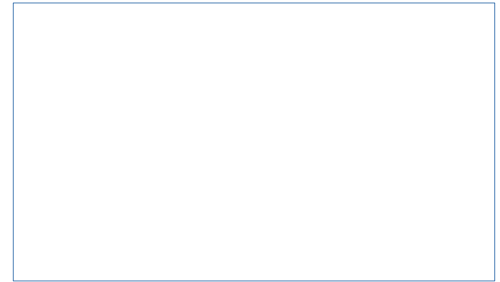

Training Metrics

- Expenditure per employee
- Learning received per employee
- Expenditure as a percentage of payrolls (Number of hour worked)
- Expenditure as a percentage of revenue
- Cost per learning hours received
- Percentage of expenditures for external services

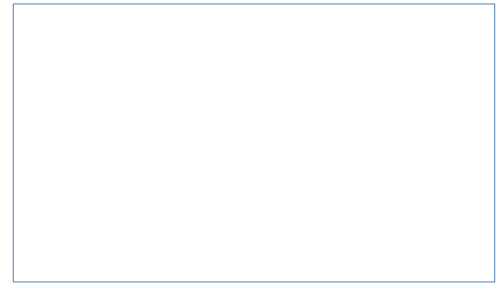

Training Metrics (cont.)

- Learning hour received per training and development staff member
- Average percentage of training activity outsourced
- Average percentage of learning hours provided via different delivery method
- Supervisor to staff ratio
- HR to staff ratio
- Cost of HR per employee
- Learning and development hours' ratio

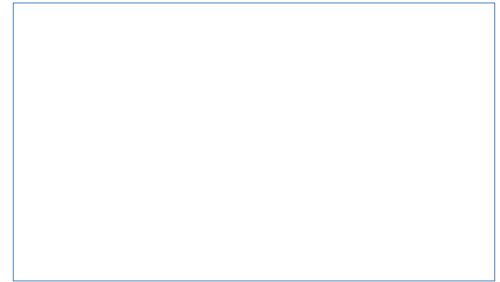

Training Metrics (cont.)

- L & D cost per employee
- Absenteeism in training = Number of employee absent / total training participants
- E – Learning = Total E- learning training / Total Trainings
- Full time employee vs. contract employees

Training Metrics (cont.)

- How many training staff members are there for each employee?
- $\text{Employee trained} / \text{Total number of employees}$
- $\text{Total training cost} / \text{number of employees trained}$
- $\text{Total training cost} / \text{number of hours training provided}$

Thank You
