Steps of Employee development

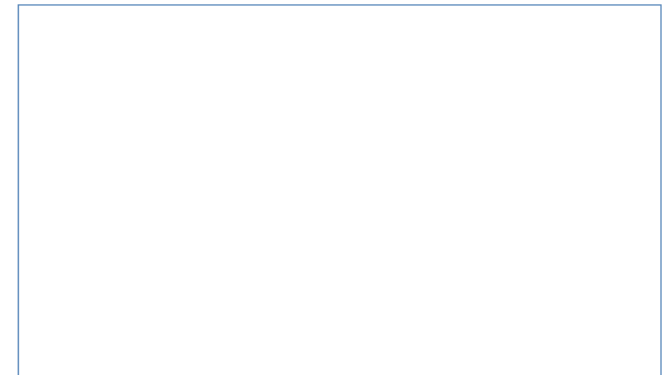

Prof Santosh Rangnekar

Department of Management Studies, Indian Institute of Technology- Roorkee

Contents:

- Introduction
- Steps in the Executive Development Programmes
- Management Development Program in Different Organisations
 - TAS
 - Infosys
 - AIMA
 - WIPRO
 - Cognizant Technologies
 - Others
- Methods/techniques of executive development
- Selection of A Suitable Method
- Research Paper
- Book Recommendation

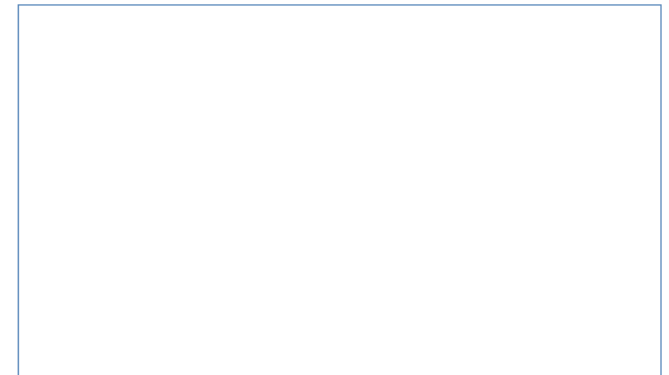

Introduction:

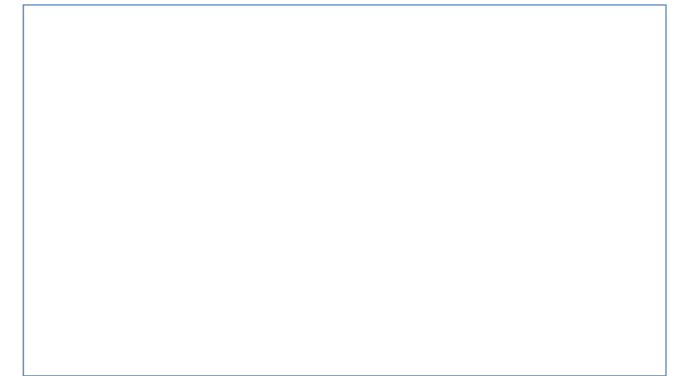

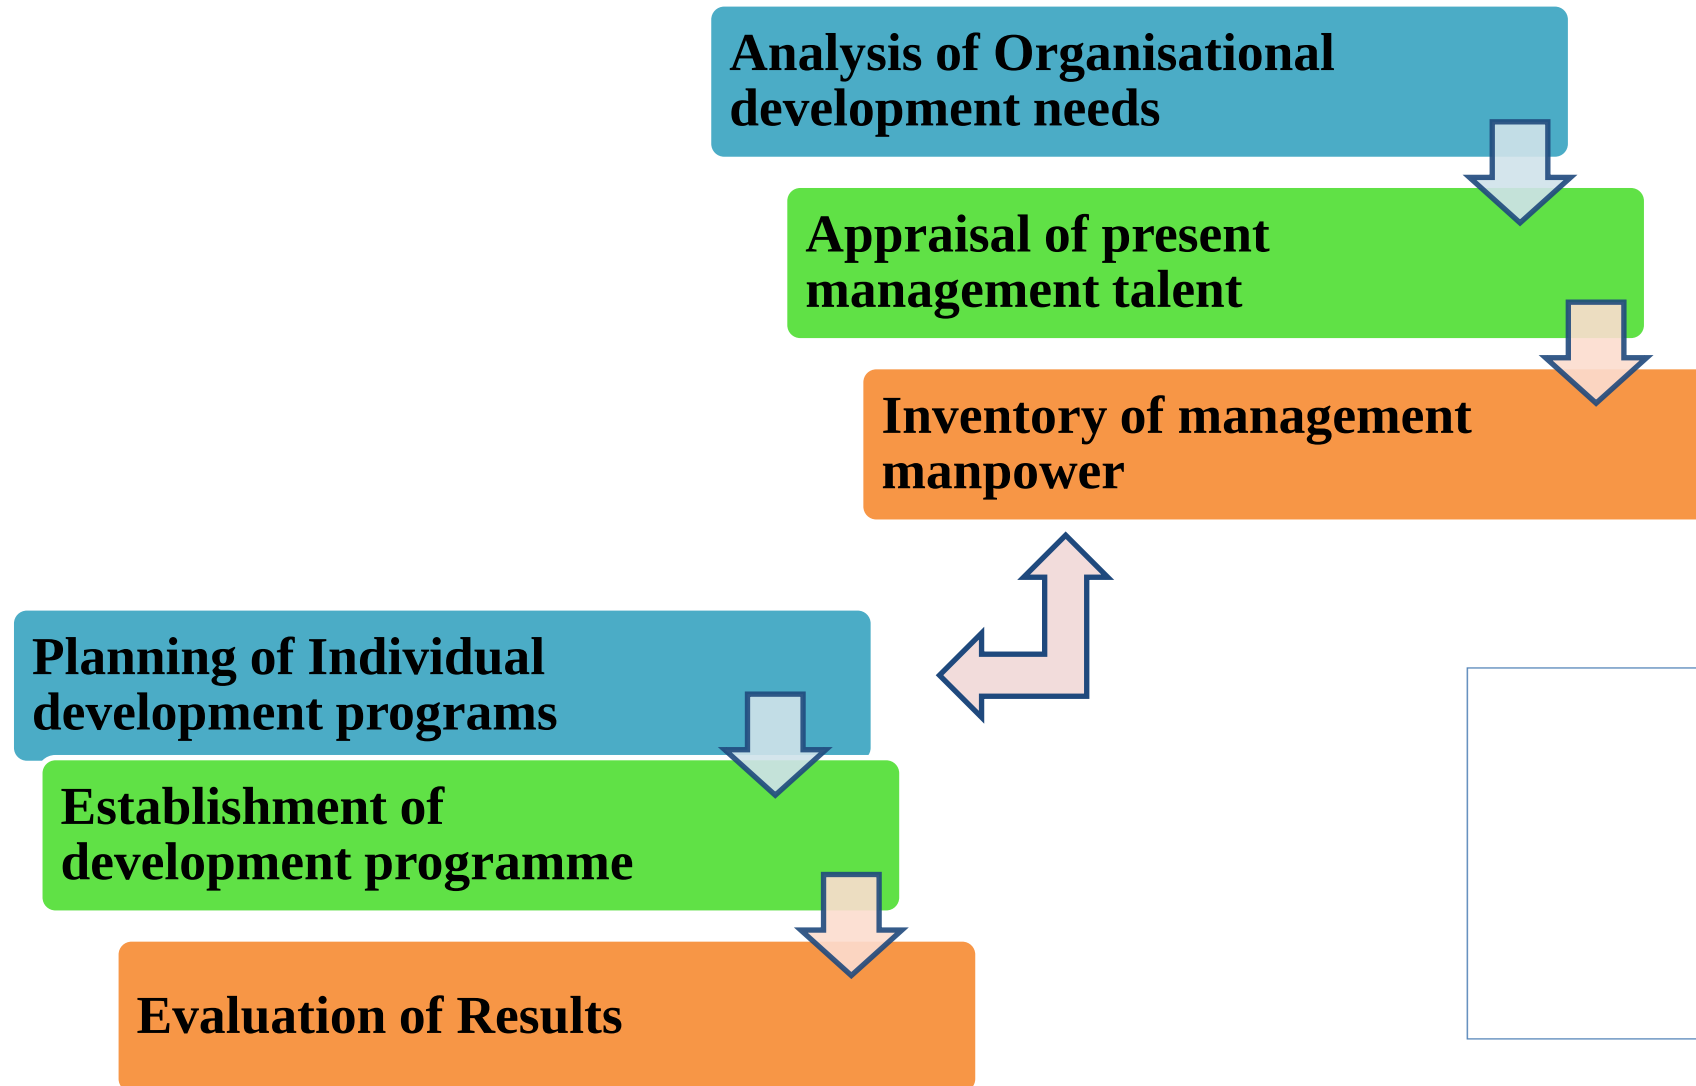

The basic purpose of executive development is to improve managerial performance by imparting knowledge, changing attitudes or increasing skills.

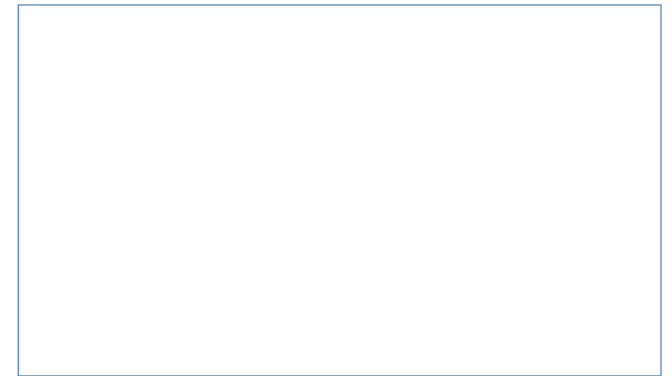

Training certainly helps in improving job-related skills but when the intent is to enhance executives' ability to handle diverse jobs and prepare them for future challenges the focus must shift to executive development.

Steps in the Executive Development Programs

Management Development Programs in Different Organizations

TAS : The Tata Group's Managerial Development Programme for young managers.

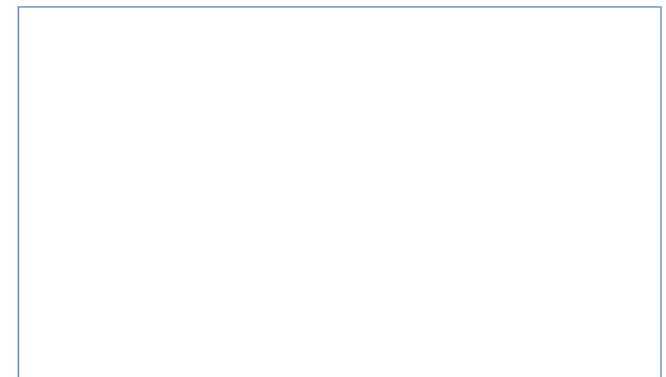

- Known as Tata Administrative Service, conceived by J.R.D. Tata in **1950's**.
- emphasizes structured orientation through classroom inputs and field visits.
- A seven-week rural assignment exposes the trainees to community work and rural India.
- Include three business stints of 15 weeks duration in sales and marketing, manufacturing and operations, and corporate strategy, finance and human resources.

Infosys

- Management Development Center
 - Software Development Center
 - Global Education Center
 - Infosys Leadership Institute (ILI)
- The total capacity for students, learners, faculty, et al on campus is 6000.
- ILI headed by Mr. K. G. Ramachandran, CMD of B.H.E.L
- 40 specialist professionals
- ILI's main objective: to develop managerial abilities, on-boarding and develop leaders.
- 3 Pillars of ILI: Learning Managers, Leaders Teach and Line Partnership.
- “On-boarding” is an intensive, 14-week program that addresses orientation of new recruits on soft skills.
- “Developing Managerial Abilities” programs are titled Consulting Skills, Pravesh, Maestro, Ambassador and Diplomat. These consist of modules that are structured around Hygiene as well as Functional areas.

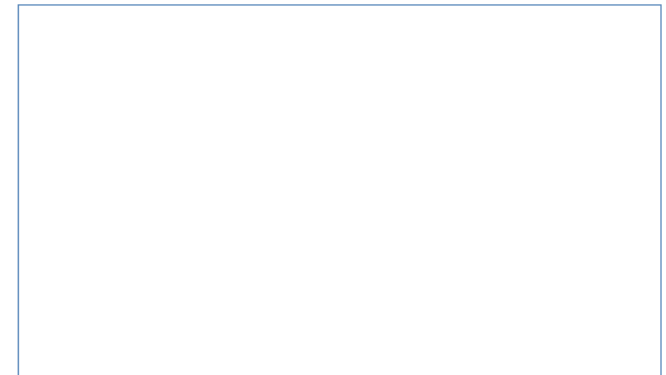

AIMA

- AIMA has conducted in-house business simulation exercise at TATA Power, TISCO, RIL, Aditya Birla Group, NTPC, CESC, ONGC, IOCL, HPCL, ESSAR, BSES, JEUSCO, MUL, Hero Honda and many more.

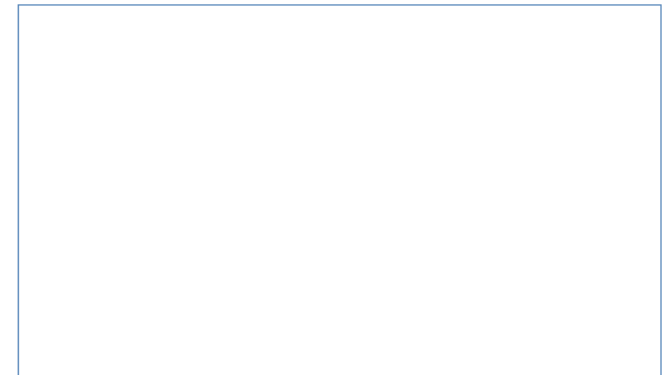

Now more and more organisations are planning to make it a regular feature in their in-house training programs.

- National Student Management Games (SMG) are now held in association with INFOSYS who is the title sponsor for these games.

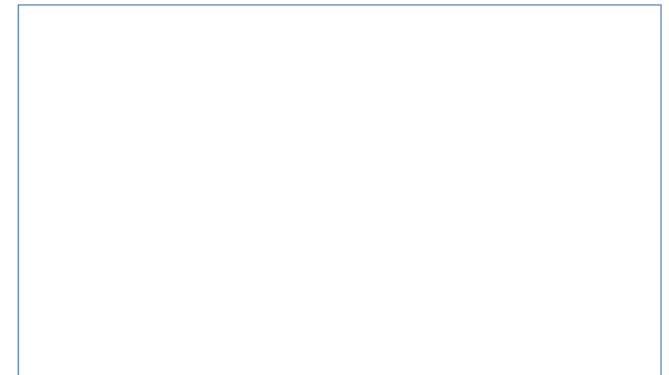

Wipro:

- Management development is now high priority for companies on fast-track growth.
- Wipro believes in growth from within -They have a philosophy now for many decades that if they have an internal person who is 60 per cent ready for the job, they are willing to bet on that person rather than look outside."
- Soft skills such as communication skills, presentations skills.

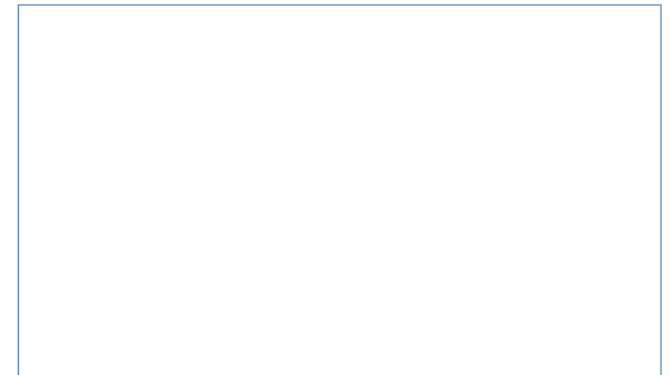

Wipro (cont.)

- Wipro has put in place programmes for management development: The Future Managers' Program and the Global Managers' Program.
- Wipro has different programmes catering to different life-cycle stages of the manager:
 - The New Leaders' Program is for the first-time leader
 - Wipro Leaders' Program (WLP) for the mid-level leader
 - The Business Leaders' Program for a General Manager moving into a business role, and
 - a Strategic Leaders' Program for top management.

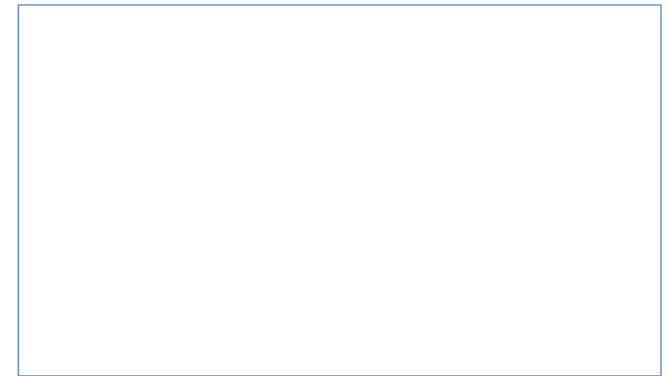

Cognizant Technologies:

- MDP is used as an appropriate managerial intervention for an executive's growth. They do not have a menu system for the executives to choose from; instead, they design an appropriate curriculum as per the needs of the executive.
- Cognizant has tied up with IIM Bangalore, which has customised programmes to suit its business needs. The two-week residential programme is for middle and senior managers.
- Senior executives at Cognizant undergo leadership programmes at Stanford and Harvard.

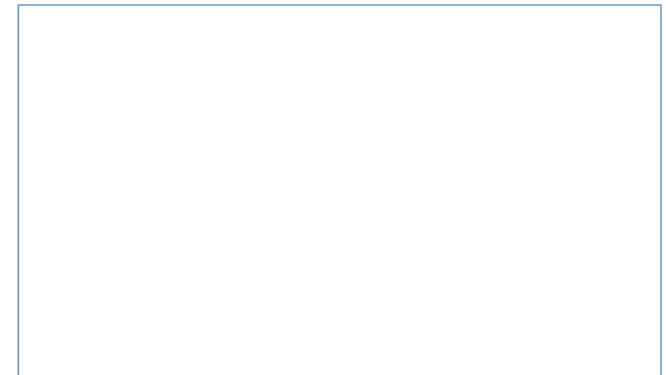

Other Organizations

Organisations such as L'Oreal, Procter & Gamble, Goldman Sachs and GE have recognized one of the key factors to excel in attracting and retaining high-caliber employees in today's competitive labour market using an appealing management development programme (MDP).

Methods/techniques of executive development:

1. Decision-making skills	(a) In-basket (b) Business game (c) Case study
2. Interpersonal skills	(a) Role play (b) Sensitivity training (c) Behaviour Modelling
3. Job knowledge	(a) On-the-job experiences (b) Coaching (c) Understudy
4. Organisational knowledge	(a) Job rotation (b) Multiple management
5. General knowledge	(a) Special courses (b) Special meetings (c) Specific readings
6. Specific individual needs	(a) Special projects (b) Committee assignments

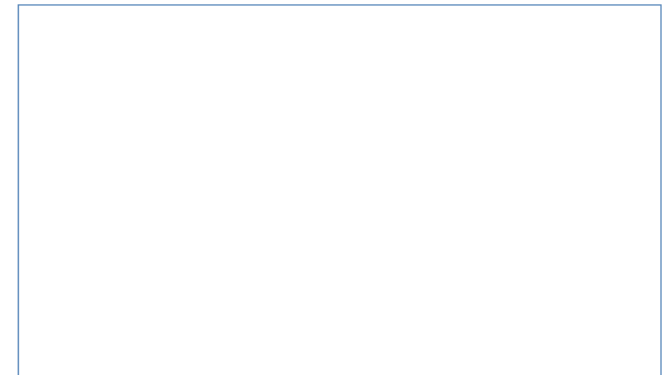

Methods/techniques:

❖ **In-basket:** The trainee is asked to look into a number of papers such as memoranda, reports, telephone messages that typically confront a manager and respond appropriately.

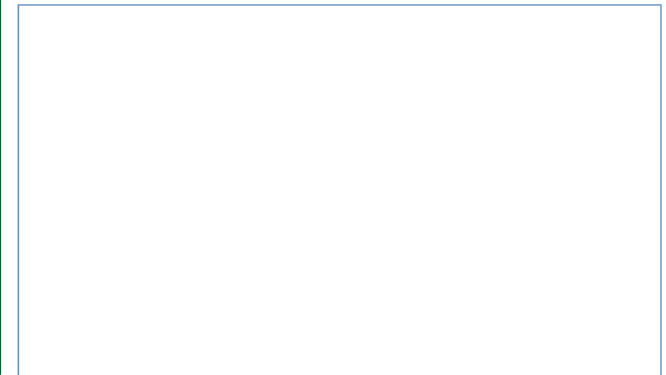

- +Trainees learn quickly, as they have to do everything within a time frame
- +Creates healthy competition between participants allows them to grow
- The method is somewhat academic and removed from real life situations.
- Participants rarely respond to such imaginary situations in an enthusiastic manner

❖ **Case-study:** The participant is asked to take up a simulated business problem and take appropriate decisions.

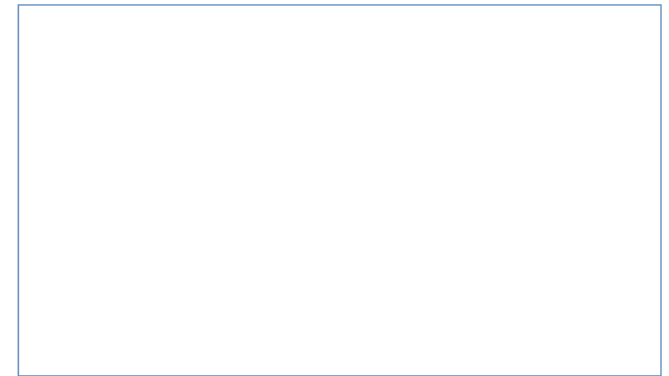

Merits and demerits of the case study method:

Merits	Demerits
❖ Improves problem-solving skills of participants. ❖ Trainees can apply theory to practical problems and learn quickly. It is a way of learning by doing. ❖ Trainees learn how others solve a situation in their own unique way. They get a feel of how others work at a problem and begin to appreciate each other's thinking. ❖ Case studies can provide interesting debates among trainees, as well as excellent opportunities for individuals to defend their analytical and judgemental abilities. ❖ If the case reflects a real life situation, participants take keen interest and examine the cross-currents with an open and inquisitive mind.	❖ Good case studies do not originate easily. They are costly and time-consuming (collect data, analyse, report, summarise) exercises. ❖ Examining historical evidence may fail to develop the analytical and reasoning abilities of participants. ❖ Cases, sometimes, are not sufficiently realistic to be useful. ❖ Cases may contain information inappropriate to the kinds of decisions that trainees would make in a real setting. ❖ Indiscriminate use of case studies may not help participants who are not mature enough to analyse and participate in discussions actively. ❖ A trainee who is not skilled in this technique can undermine its usefulness. ❖ The case study method have little or nothing in common with the trainee's workplace, which may limit its effectiveness.

When using case studies:

- ❖ Be clear about learning objectives and explore possible ways to realise the objectives.
- ❖ Decide which objectives would be best served by the case method
- ❖ Find out the available cases that might work or consider developing your own
- ❖ Set up the activity – including the case material, the room and the schedule
- ❖ Observe the principles that guide effective group interactions
- ❖ Provide an opportunity to all trainees to participate meaningfully and try to keep the groups small.
- ❖ Stop for process checks and get set to intervene when interactions go out of hand.
- ❖ Allow for different learning styles
- ❖ Clarify the trainer's role as a facilitator
- ❖ Bridge the gap between theory and practice

Methods/techniques

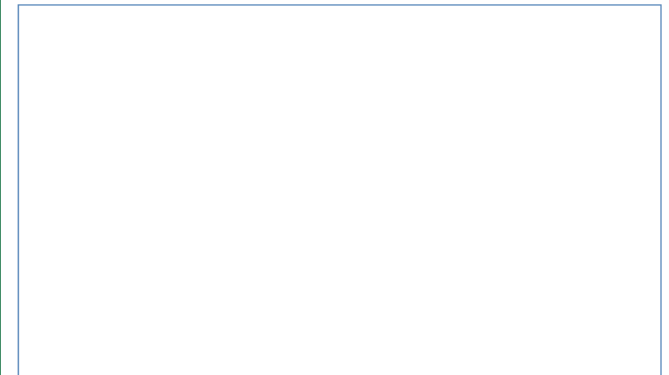

❖ **Business games:** It is a learning exercise representing a real-life situation where trainees compete with each other to achieve specific objectives.

Merits

- ❖ Business games compress time; events that take painfully long time are made to occur in a matter of hours.
- ❖ One can learn from mistakes, take a different course of action by looking at the consequences and improve performance.
- ❖ They promote increased understanding of complex relationships among organisational units.
- ❖ “They help trainees develop their problem solving skills as well as to focus attention on planning rather than just putting out fires.”
- ❖ Prompt feedback facilitates quick learning.

Demerits

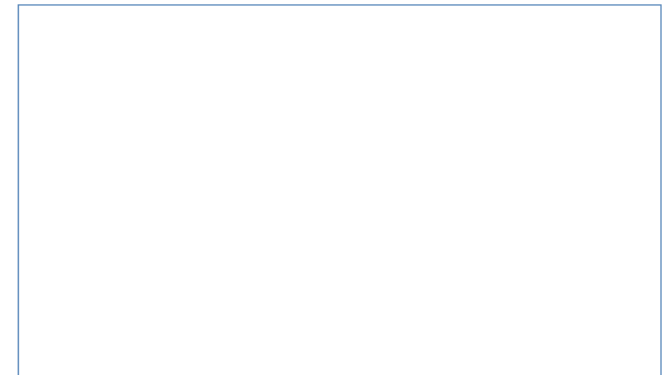

- ❖ Difficult and expensive to develop and use good business games.
- ❖ They are often far removed from reality. In real life, an executive may get unlimited chances to find his way through the jungle, depending on his mental make-up (instead of choosing from an imaginative list of alternatives).
- ❖ Participants may become so engrossed in pushing others to the wall that they fail to grasp the underlying management principles being taught.
- ❖ Creativity may take a back seat when unorthodox strategies advanced by innovative participants may not find acceptance from others in the race.

Methods/techniques

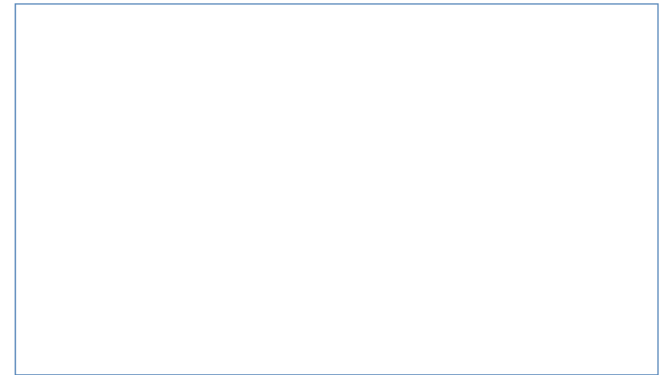

❖ **Role play:** This is a technique that requires the trainee to assume different identities to learn how others feel under different circumstances.

- + Participants develop interpersonal skills
- + They learn by doing things actually
- + The competitive environment compels participants to listen, observe, analyse and improve their own performance by exploiting their potential fully
- lack of realism in this method comes in the way of enthusiastic participation
- not easy to duplicate the pressures and realities of actual decision making
- most trainees may not be very comfortable in role playing situations

Trainer's responsibilities in role playing situations:

- ❖ Ensure that members of a role playing group get along with each other
- ❖ Select and prepare the participants by introducing a specific situation
- ❖ Ask participants to actually come out with potential characters
- ❖ Realise that volunteers make better role players
- ❖ Prepare observers by giving them specific tasks such as evaluation, feedback etc.
- ❖ Guide the role play enactment over its bumps, since it is not scripted
- ❖ Keep it short
- ❖ Discuss the enactment and prepare bulleted points of what was learned

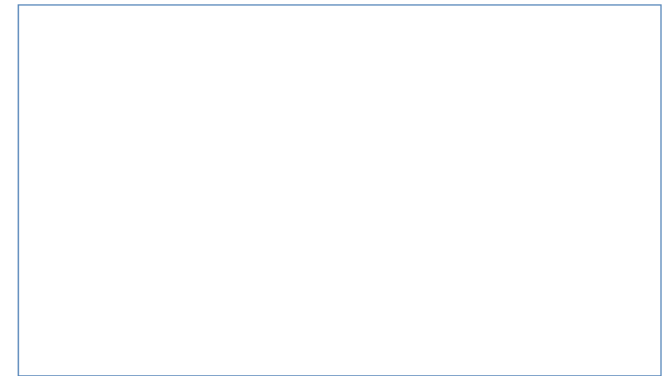

Methods/techniques

- ❖ **Sensitivity training:** This is a method of changing behaviour through unstructured group interaction. (also known as T-group training, where T stands for training)

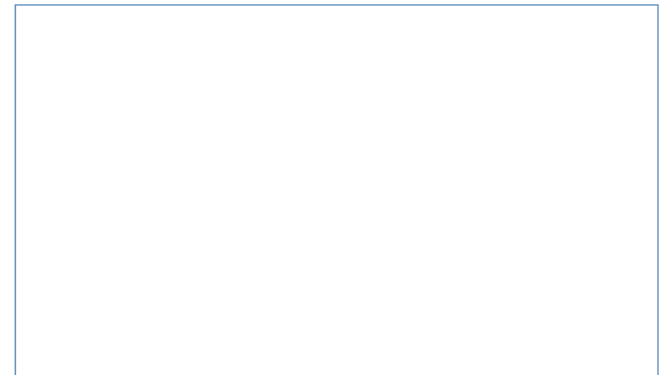

Features of T-group training

- ❖ T-Group consists of 10-12 persons.
- ❖ A leader acts as a catalyst and provides a free and open environment for discussion
- ❖ There is no specified agenda
- ❖ Members express their ideas, feelings and thoughts freely and openly
- ❖ The focus is on behaviour rather than on duties
- ❖ The aim is to achieve behaviour effectiveness in transactions with one's environment

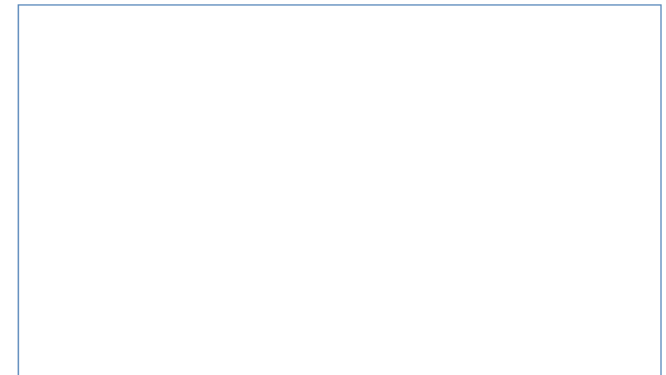

Benefits:

- ❖ Participants gain rich experience in getting along with people
- ❖ The exclusive focus on each others' behaviour helps participants to observe, analyze and then respond appropriately
- ❖ Trainees can find out where they stand in comparison to others
- ❖ The agenda less discussions encourages the participants to come out more openly and share their opinions with others
- ❖ The opportunity to take charge of the group is always inherently present for the right candidate.

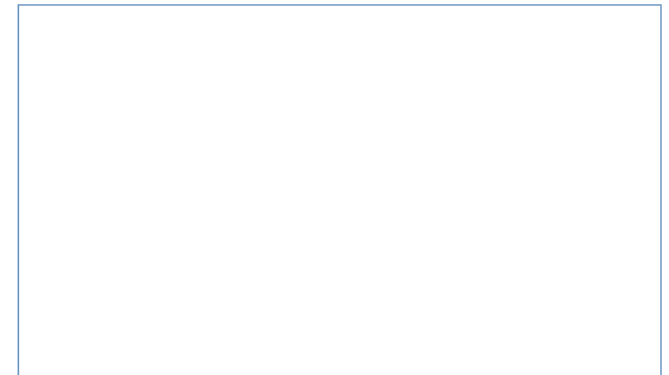

Costs:

- ❖ Considerable time is wasted in agenda-less, direction-less discussions
- ❖ T-group leaders may lack the skills to instil enthusiasm and confidence in participants.
- ❖ There is an immoral and unjustified invasion of privacy, based on false assumptions about the nature of human relationships at work.
- ❖ The interchange of opinions in an open manner may be punished by superiors at a later stage, using some pretext or the other
- ❖ T groups may actually destroy team learning and team spirit as they encourage participants to be hostile without feeling guilty during training.

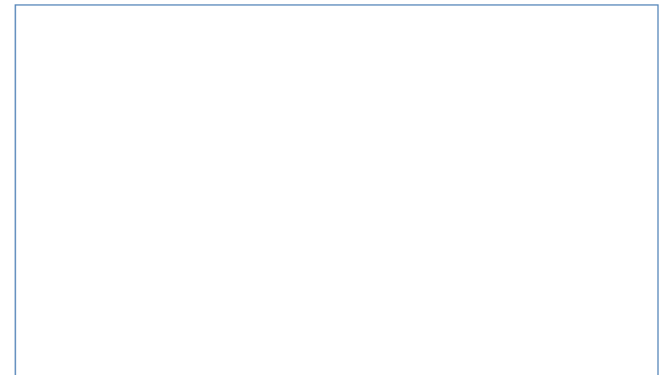

Methods/techniques

- ❖ **On the job experience:** This is a kind of class room learning where the trainee learns by actually doing things under the supervision of an experienced supervisor. Such methods are highly useful for certain groups like scientific and technical personnel
- ❖ **Behaviour modelling:** This is an approach that demonstrates desired behaviour and gives trainees the chance to practice and role-play those behaviours and receive feedback.
- ❖ **Coaching:** This is a development activity in which a supervisor plays an active role in imparting job knowledge and skills to the trainee. For effective coaching, a healthy and open relationship must exist between employees and their supervisors.

Merits and demerits of coaching

- Trainees learn quickly by actually doing a piece of work and obtain feedback
- Where the trainer and the trainee interact in an open manner, there is tremendous scope for the trainee to grow by seeking clarifications continuously and rectifying mistakes
- A lot depends on the interpersonal skills of the supervisor
- The learner, often, cannot develop much beyond the limits of his own supervisor

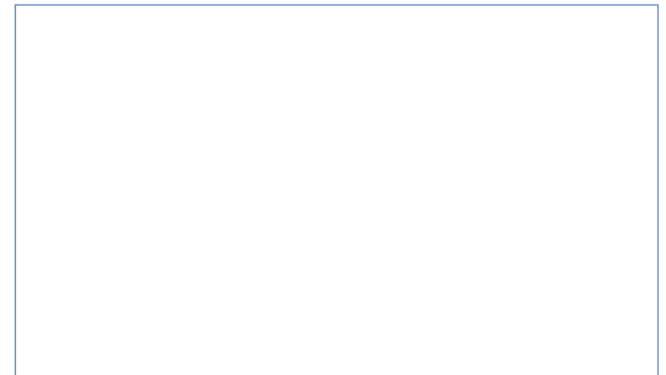

Methods/techniques

❖ **Understudy:** This is a development method wherein potential managers are given the chance to temporarily relieve an experienced manager of part of his job and act as his substitute during the period, giving him vital insights into the overall job that would make him the automatic choice in the succession process.

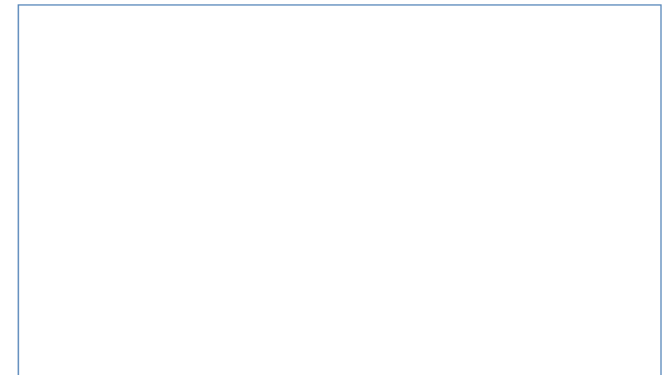

❖ **Job rotation:** Moving a trainee from job to job so as to offer cross training is called job rotation. The idea behind this is to give managers the required diversified skills and a broader outlook.

❖ **Multiple management:** It is a system in which permanent advisory committees of managers study problems of the company (thereby gaining first hand experience of various important aspects of business) and make recommendations to higher management.

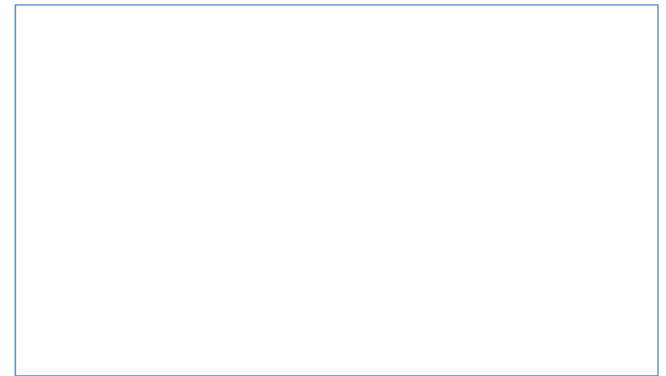

Methods/techniques

- ❖ **Special courses, meetings, readings:** In addition to the above, managers could also benefit by attending workshops organized by academic institutions, attending special meetings organized by various government and voluntary organizations and by reading specific articles relevant to their respective fields.
- ❖ **Special projects:** In this method, a trainee is put on a project closely related to the objectives of the department.
- ❖ **Committee assignment:** In this method, an adhoc committee is appointed to discuss, evaluate and offer suggestions relating to an important aspect of business.
- ❖ **Conferences:** A conference is a meeting of people to discuss a subject of common interest. The participants exchange notes, opinions and ideas on the subject in a systematic and planner manner.

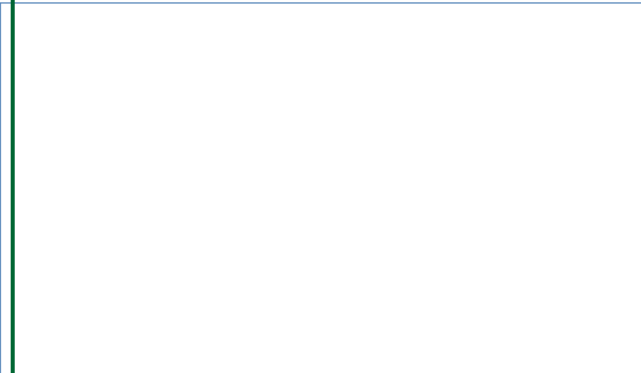

Methods/techniques

- ❖ **Lectures:** Lectures are formal presentations on a topic by an experienced and knowledgeable person. The presentation is generally supported by discussions, case studies, audio-visual aids and film shows.
- ❖ **Group discussion:** In this method, papers are presented by two or three trainees on a selected topic, followed by thought-provoking discussions.
- ❖ **Programmed instruction:** This is a learner-oriented technique which presents subject matter to the trainees in small sequential steps requiring frequent responses from the trainee and immediately offering him of their accuracy or otherwise.

Selection Of A Suitable Method:

Technique	Suitability
Job Rotation	To develop diversified skills and broaden the outlook of an executive
Understudy	To aid succession planning by developing the skills of juniors according to a pre-set plan
Multiple Management	To assist managers in expanding their outlook and knowledge in various functional areas
Case Study	To develop analytical, reasoning and problem-solving skills
Role Playing	To translate theoretical knowledge into action plans and to promote good human relations skills among trainees
Behaviour Modelling	To teach inter-personnel and cognitive skills
In-basket	To promote situational judgement and social sensitivity
Business Games	To develop smart thinking, quick reactions, initiative, organising and leadership skills
Sensitivity Training	To promote self awareness and its impact on others
Conference	To improve and expand knowledge, attitudes and develop interpersonal skills
Lecture	To impart conceptual knowledge to a large audience within a short span of time.

Research Paper

The objectives of the study were to investigate the trends in development practices and their effects on employee attitudes by analyzing differences in perceptions of the significance of development, satisfaction with development, and commitment in two samples collected at different times (1997 and 2000). The study also aimed to analyze the association between development experiences and organizational commitment in different demographic groups

Research Paper

Methodology:

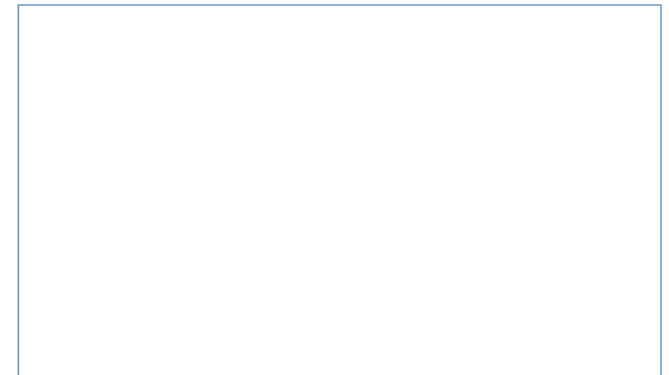

- The study used data from two surveys conducted by the Leading Edge Research Consortium in 1997 and 2000, involving six companies in the UK from various industries .
- The analysis procedure involved defining measures of development, satisfaction with development, and organizational commitment, comparing their distributions in the two samples, and examining the correlation structure between these variables. Regression models were built to establish the association between organizational commitment and development experiences, controlling for individual characteristics .

Research Paper

Findings:

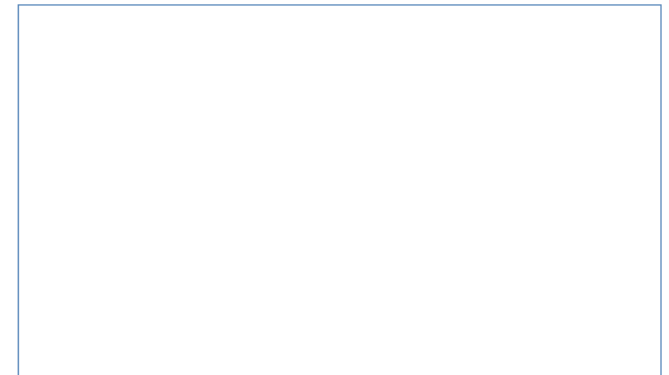

- The study highlighted the importance of implementing practices that enhance development opportunities for older and low-skilled workers, as organizations providing the best development experiences only to managers and professionals may not be prepared for challenges with an aging and diverse workforce .
- It emphasized the need to focus on on-the-job training interventions, developing self-directed and self-motivated employees, and shifting towards a participation model for development activities in the workplace .
- The results indicated a transition from traditional development practices towards a new career model, with implications for the role and status of training and human resource development activities within organizations.
- The study also noted limitations related to sample bias towards higher levels of commitment, the size and industry of organizations, and the need to consider contextual variables when studying career attitudes.

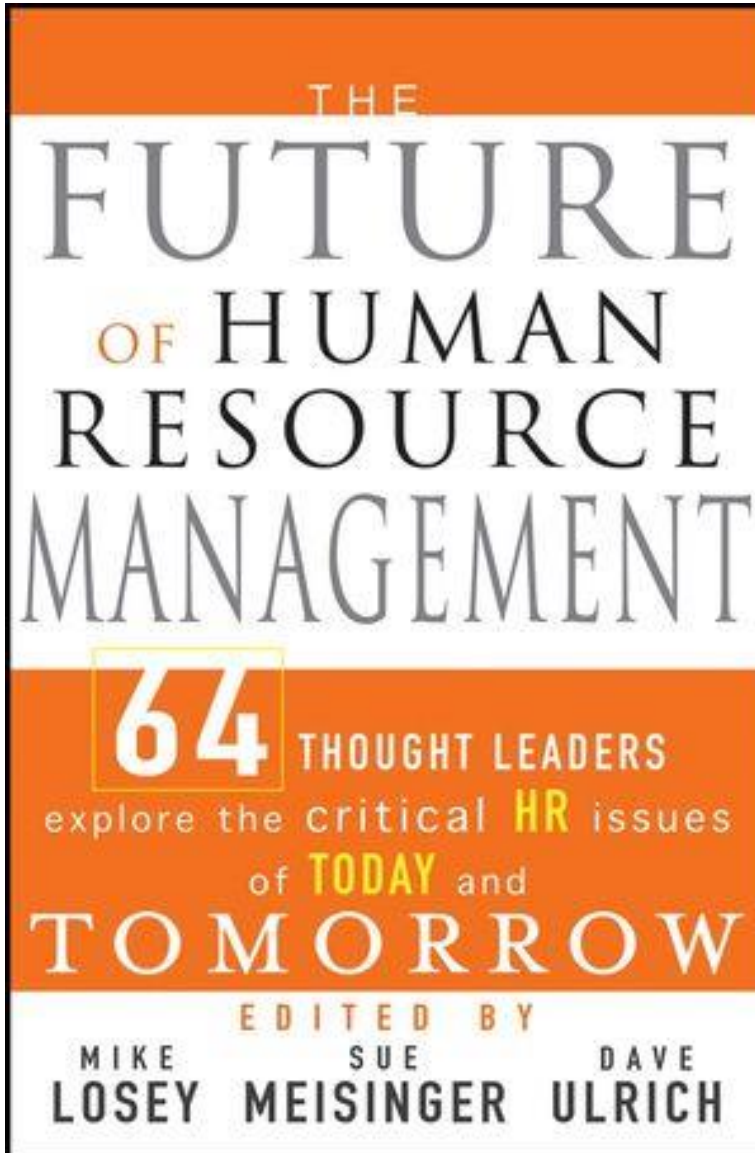

Research Paper

Implications:

- The findings suggest that organizations should broaden their development practices to include a wider range of employees, focusing on skill development across different workforce groups to add competitive value.
- Companies are advised to invest in on-the-job training, develop self-directed employees, and shift towards a participation model for development activities to meet the needs of a changing workforce.
- HR functions should play a role in preserving and increasing the knowledge of all individuals in organizations to make it accessible and beneficial for employers.
- The study highlights the importance of understanding the changing role and status of training and development activities within organizations, emphasizing the need for HR to adapt to new trends in development practices.

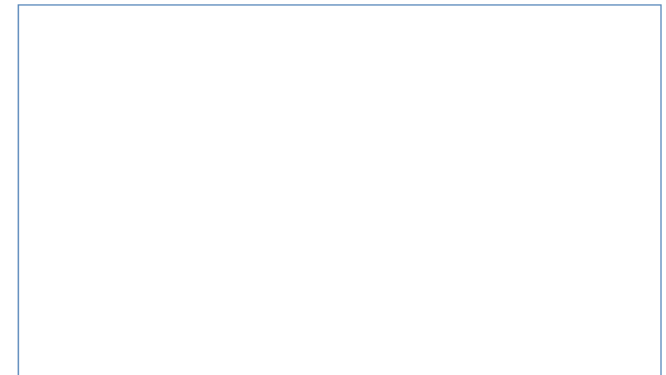

Book Recommendation

The Future of Human Resource Management: 64 Thought Leaders Explore the Critical HR Issues of Today and Tomorrow

Mike Losey (Editor), Sue Meisinger (Editor), Dave Ulrich (Editor)

ISBN: 978-0-471-67791-8 | May 2005 | 448 Pages

"The Future of Human Resource Management" is a groundbreaking collection that gathers insights from 64 HR thought leaders. It delves into the evolving landscape of HRM, tackling pressing challenges and unveiling future opportunities. This book is indispensable for understanding HRM's trajectory, offering diverse perspectives that equip readers with knowledge to navigate and shape the future of HR practices effectively.

Thank You
